

HMFC carbon dioxide equivalent (CO₂e) emissions monitoring: Carbon Footprint

Boundaries:

- Scope 1 emissions include natural gas
- Scope 2 emissions include electricity used
- Scope 3 emissions include electricity transmission & distribution, water use and water treatment, staff commuting and gardening

Notes:

- There are 2 commercial refrigerators in the Old Town Hall, installed in October 2020 and as such have thus far not been serviced and no gasses refilled.
- There are 2 domestic fridges, in The Dining Room and The Guildroom, which are disregarded.
- There is 1 x 25 year old commercial drinks fridge in The Dining Room bar, which has never been serviced or gasses refilled and as such disregarded.
- Staff commuting is on an assumption of an average of 13 days per driving employee per month in the office.
- Fuel used by contractors for grounds maintenance services is their best estimate for a typical month.
- It is noted that 2022 was almost double the emissions of 2021. This is largely attributable to covid-19 restrictions in 2021 and therefore less events within the Guildhall and staff on
